

Your Next Generation Technology Partner

Las Vegas, CTIA Wireless 2008, April 1-3, 2008

- Pacific Rim Mobile Technologies and ABIT Corporation show the UMTS Air Protocol Analyzer AP-6000 and Air Recorder AR-7200, and introduce the LTE prototype Signal Generator and Decoder AQ-10/20 at CTIA Wireless 2008, Canada Pavilion 6505D-C3

We are very pleased to announce we will be exhibiting our successful Air Protocol Analyzer AP-6000, now supporting advanced UMTS features such as HSPA+ and the recently upgraded EDGE analysis capability for GSM networks, along with the Air Recorder AR-7200.

Hardware and software development time of WCDMA/HSDPA/HSUPA/HSPA+ and GSM/GPRS/EDGE devices can be greatly reduced by using the AP-6000. In addition, the analysis and location of problems during Inter Operability Testing (IOT) is made much easier.

AP-6000 & AR-72000

The AP-6000 allows developers, researchers and inter-operability test engineers to perform in-depth analysis of all three layers of the Uu air interface with a reliable, vendor independent tool.

We will also be unveiling the most recent and exciting development: the AQ-10/20 LTE prototype Signal Generator and Decoder. This product, based in a completely new hardware platform, will be expanded to include LTE Layer-1 signal storage and analysis, CPRI and OBSAI signal storage and analysis, LTE Layer-1 signal generation, and protocol verification. This powerful LTE Air Protocol Analyzer will, without a doubt, be an essential tool for those developing products that require testing the LTE air interface to verify its compliance with the 3GPP standards, as it is the AP-6000 for WCDMA systems.

About Pacific Rim Mobile Technologies

Pacific Rim Mobile Technologies is 'Pioneering 3G Mobile Testing Solutions' by providing best-in-class service in the areas of sales, marketing and technical support for 3G mobile technologies. Our range of products includes the industry leading ABIT Air Protocol Analyzers (AP). Pacific Rim Mobile Technologies owns the worldwide rights for the range of APA products designed and manufactured by ABIT Corporation of Japan.

Being a completely vendor independent testing solution, AP products have become the industry standard tool for R&D, performance and IOT compliance verification for the 3G networks including 3GPP/W-CDMA, HSDPA, HSUPA and GSM. Our APs are currently being used by major mobile equipment vendors and network operators around the world.
